## 3.0 Page Element Definition

3.1. headPanel

3.1.1. Layout

headPanel is an absolutely positioned fixed-height div element spanning 100% of the width of the page. Both the corporate and the 'Greet/Log Out' sections are divs with .gif bitmaps pre-cast on a background matching the headPanel background as background images. A transparent graphic would be most desirable; however support for transparent .png type bitmaps is inconsistent across current versions of browsers (The pixel ring around transparent .gif images make them unsuitable for this element).
